

How DedicatusIT Technicians Operate Inside Your MSP

Our operating standard — the discipline every dedicated technician we place runs on, from day one.

A DedicatusIT technician works exclusively for one MSP. They sit inside your tools and your process, white-label, like a member of your team who happens to work remotely. This is how they operate.

We adopt your stack, not ours

- Your PSA, your RMM, your documentation, your ticketing and your escalation paths — we work inside them.
- We learn your clients' environments, not a generic queue. Embedded, not shared.
- Nothing we do is branded as us; to your clients, it's your team.

We follow a defined operating discipline

- **Ownership:** a ticket assigned to our technician is theirs until resolved or formally handed over.
- **Ticket discipline:** objective stated up front; checked / found / did / verified recorded; notes a stranger can follow; real time logged.
- **Handover rigor:** every shift ends with a written handover so the next person starts without calling anyone.
- **Quality over speed** when the two conflict.

We report through a Service Delivery Manager

- A named SDM owns the relationship and the reporting — you're not managing a remote individual alone.
- Weekly operational reviews, a monthly governance pack, and quarterly strategic reviews.
- You always have a clear answer to “is the service healthy, and what's changing?”

We hold the security and data line

- We work inside your security stack and policies — identity verification, least privilege, MFA never bypassed.
- Client data stays in your systems; nothing on personal devices or channels; temporary access always expires and is reverted.
- Breaches or suspicions escalate immediately, by call then in writing. We operate under the data-protection law that applies to your clients.

How we're measured

- SLA adherence, first-contact resolution, reopen rate, and CSAT on the tickets we handle.
- Patch and backup compliance, and asset-register accuracy where we own it.
- Two things are personal to every technician: worknote quality and knowledge contribution — sampled and reviewed.

This is exactly how we run, from day one — not a pitch deck, the actual standard. If it fits how you want your service delivered, let's talk about a short pilot.
