

How DedicatusIT Dedicated Technicians Work With Your MSP

Our service standard — what a dedicated technician is, how they embed, and how we stay a quiet asset to both you and them.

DedicatusIT places a dedicated technician who works exclusively for one MSP. They sit inside your team, your tools and your process, white-label — like a team member who happens to work remotely. You manage the day-to-day; we make sure the seat keeps getting better. (When a client needs full NOC coverage, we can also stand that up — see our NOC Operating Standard — but the dedicated-technician model below is the core of what we do.)

Embedded in your team, governed by you

- Your PSA, RMM, documentation, ticketing and escalation paths — the technician works inside them, not ours.
- You own the day-to-day: roster, leave, priorities and direction sit with your team, exactly as they would for an internal hire.
- They learn your clients' environments over time — embedded, not a shared queue. To your clients, it's your team.
- Identity and devices managed through your stack (for example Microsoft Entra and Intune) under your policies.

How the technician operates

- **Ownership:** a ticket assigned to them is theirs until resolved or formally handed over.
- **Ticket discipline:** objective stated up front; checked / found / did / verified recorded; notes a stranger could follow; real time logged.
- **Security & data:** they work inside your policies — identity verified before action, least privilege, temporary access reverted, breaches escalated at once.
- **Quality over speed** when the two conflict.

The layer we keep — staying a quiet asset to both sides

Because you govern the day-to-day, our job isn't to manage over your shoulder. It's a thin layer that makes the arrangement better than just hiring a remote contractor — for you and for the technician.

For the MSP:

- A regular cadence with us (we run a standing check-in, e.g. bi-weekly) so you always have a direct line and a moment to flag anything early — before it becomes a problem.
- A named point of contact at DedicatusIT who stays accountable for the relationship and the technician's growth on your account.
- Continuity: we invest in the technician's skills and retention, so the knowledge they build on your environment stays — you're not re-onboarding every year.
- A light quality check-in, on your terms, so standards hold without us getting in your way.

For the technician:

- They're embedded in your team but not isolated — they belong to a company that develops them, mentors them and gives them a path.
- Skill growth and recognition, so the work stays enriching and they stay engaged on your account — which is exactly what keeps turnover low for you.

How we measure the seat

- The quality and reliability of the technician's work, judged the way you'd judge an internal team member.

- Continuity and engagement — a technician who's growing and staying is the outcome we optimise for.
 - Two things stay personal to every technician: worknote quality and knowledge contribution.
-

This is how we run the dedicated-technician model from day one — your governance, our quiet layer of relationship, development and continuity. If it fits how you want to grow your team, let's talk about starting with one seat.
